CHALLENGES

QUEL ONDULEUR AUJOURD'HUI ?

SG250HX

> 1 500 MW en France

SG350HX

> 300MW* en France

Nouveaux challenges

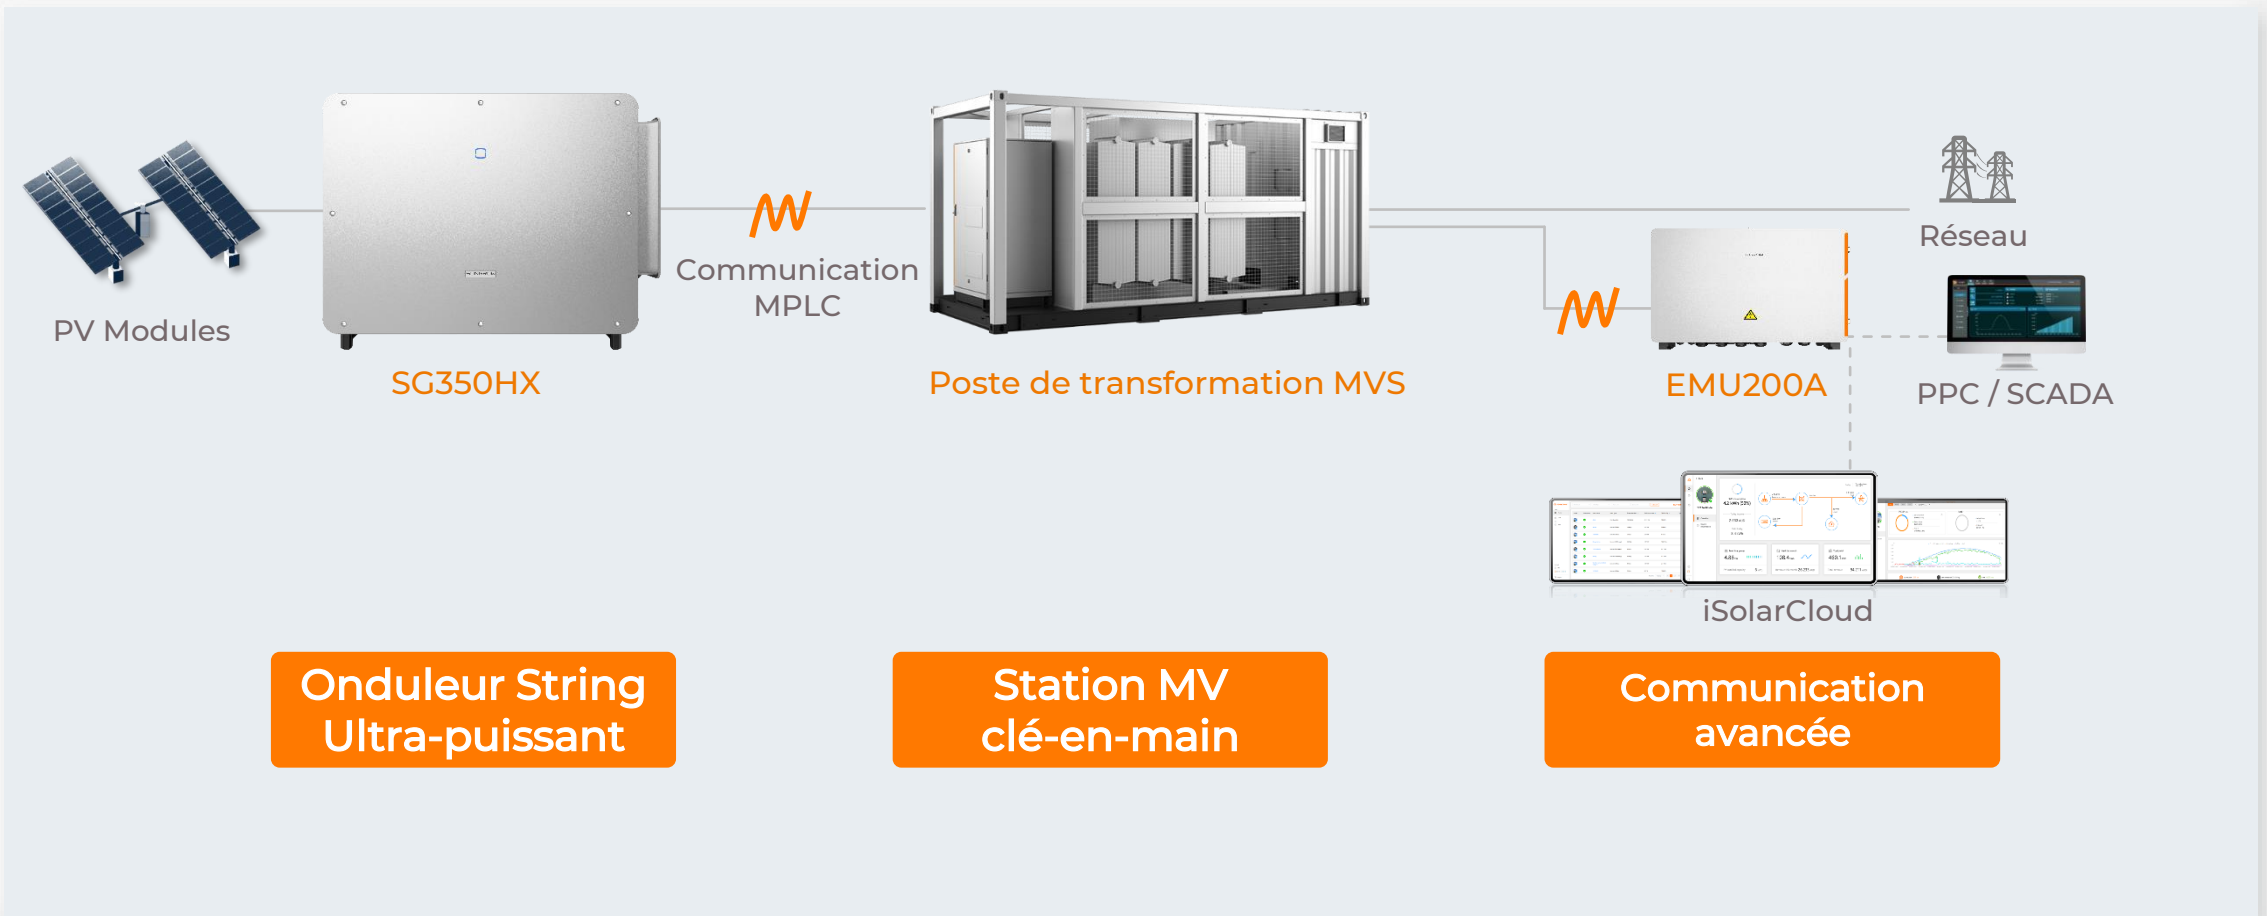

- Produire un kWh compétitif
- Densité de puissance: 250kW pour 100 kg
- Supporter le réseau électrique : PQ / LVRT-HVRT
- Compatible avec les modules bifaciaux : 30A/MPPT
- Communiquer sans compromis : Technologie CPL

- Améliorer encore le coût du kWh
 - Compatibilité avec module G12
 - Sécurité de l'installation
 - Pénétration des EnR
- Réduire le retour sur investissement
- Suivre le développement de nouveau module
- Atteindre les plus hauts standards de sécurité
- Optimiser les performances des onduleurs

SOLUTION CLÉ EN MAIN

ONDULEURS STRING + STATION MV / SMART LOGGER

SG350HX

ONDULEUR STRING ULTRA-PUISSANT

SG350HX

352 kW

352 kW à 30°C
320 kW à 40°C
1500V_{DC} / 800V_{AC}

Double bornier AC

254 A / 800V_{AC}
1 ou 2 câbles par phase
Communication CPL

12 / 16 MPPT

2 versions

12 MPPT	16 MPPT
40 A par MPPT	30 A par MPPT
24 entrées DC	32 entrées DC

IP66 / C5

Étanchéité IP66
Protection corrosion C5

EMU200A

COMMUNICATION ET SÉCURITÉ

EMU200A

RETOUR D'EXPÉRIENCE

CONNECTION DC

2 STRINGS PAR MPPT – 12 OU 16 MPPT

RACCORDEMENT AC

S'ADAPTER À TOUTES LES CONTRAINTES

Augmentation des puissances
Nouveaux challenges sur les câbles

Câbles

Câbles Unipolaires
Câbles Multipolaire
1 câble par phase $\leq 400 \text{ mm}^2$
2 câbles par phase $\leq 185 \text{ mm}^2$

Plaque AC

Plaque passe câble souple
adaptée à chaque configuration
4 solutions disponibles

Simple/double bornier AC

Flexibilité

Simple bornier section large
Double bornier plus de flexibilité
Choix illimité de câble

Simplicité

Coffret déporté
Plaque passe câble souple
adaptée à chaque configuration

COMMUNICATION CPL

FIABILITÉ ET RAPIDITÉ

Rapidité

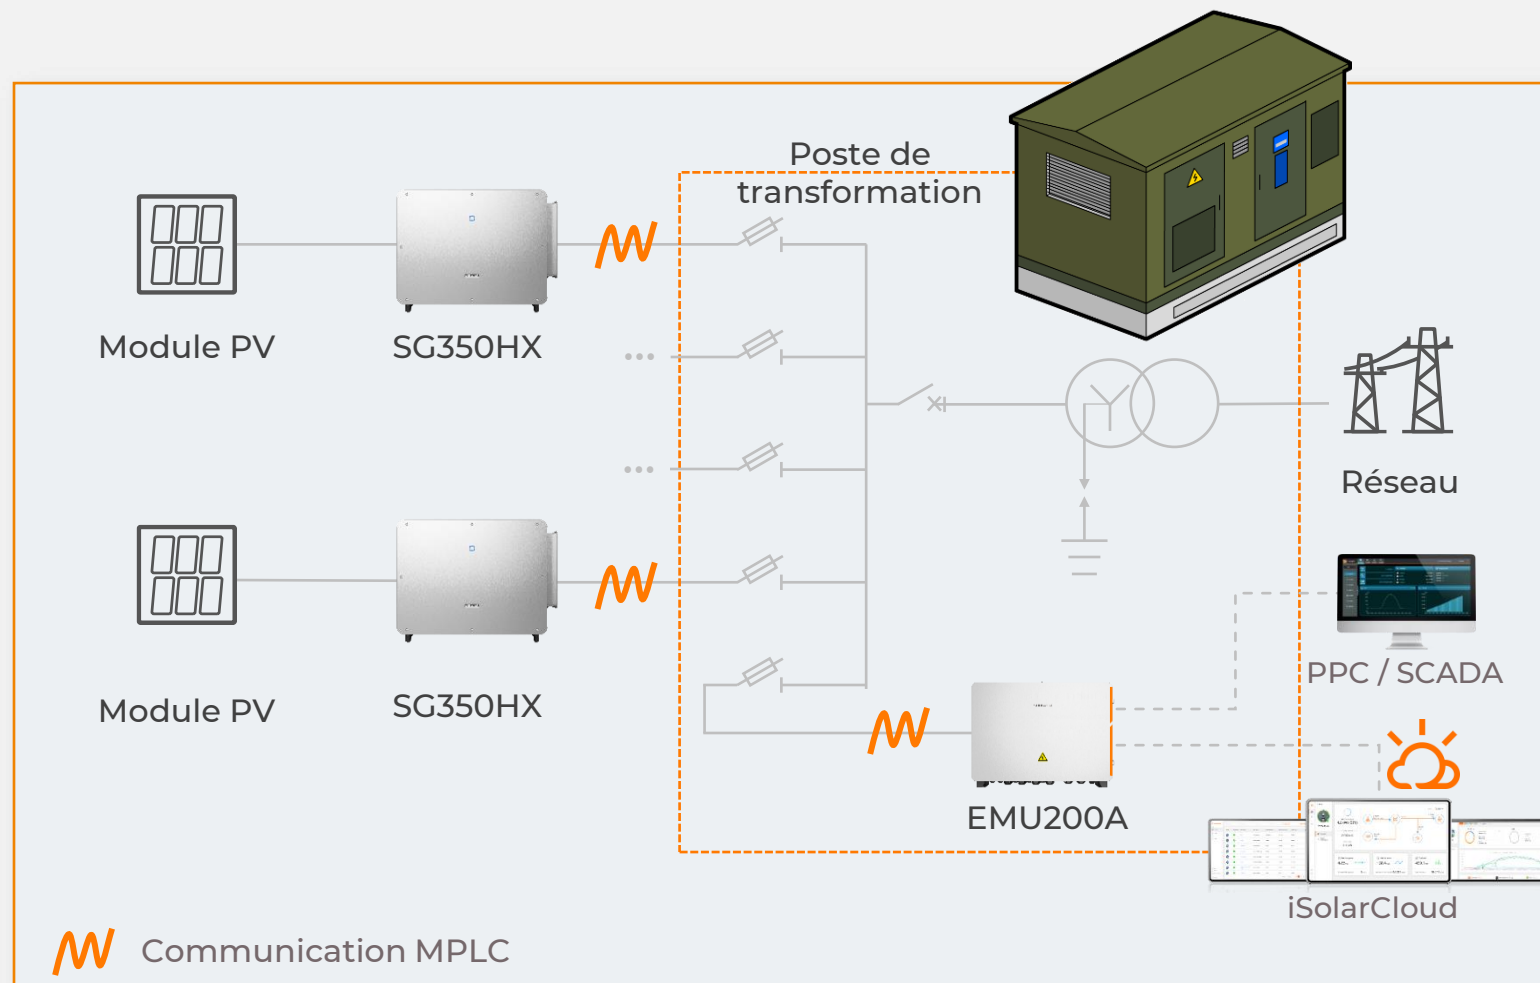

30 à 60 ms en régulation
puissance active ou réactive
Taux de transmission 115 kbps

Robuste

Signal « broadband » 0.5-12 MHz
Faible interférence (512 porteuses)
Communication fiable (pertes < 0.5%)

Simple

Distance max de 800 à 1000m
Pas de câble de communication
supplémentaire

MESURE DE L'ISOLATION

SÉCURITÉ DE L'INSTALLATION

Mesure DC

Chaque SG350HX mesure sa résistance DC au démarrage (IEC 620109-2)

Mesure AC

Chaque EMU200A intègre un CPI et mesure l'isolation globale (AC et DC) en continu

Localisation des défauts

En cas de défaut, les onduleurs redémarrent et mesurent l'isolation DC

Disponibilité de l'installation

Régime IT et surveillance suivant NF C 15-100 / IEC 61557-8

MESURE DE L'ISOLATION

SÉCURITÉ DE L'INSTALLATION

Mesure DC

Chaque SG350HX mesure sa résistance DC au démarrage (IEC 620109-2)

Mesure AC

Chaque EMU200A intègre un CPI et mesure l'isolation globale (AC et DC) en continu

Localisation des défauts

En cas de défaut, les onduleurs redémarrent et mesurent l'isolation DC

SUNGROW

Max. Current of 20A for a Single String Match Mainstream Modules, No Generation Limit

Effectively Match 182 Module

1 MPPT for 2 Strings No Generation Limit

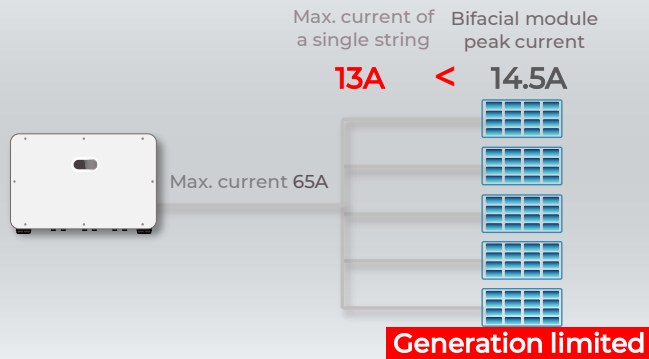

The max. current is 30A for each MPPT, and 15A for a single string, higher than peak module current

VS

1 MPPT for 5 Strings 10.3% of Generation Limit

The max. current of a single string is 1.5A lower than the peak module current

Effectively Match 210 Module

1 MPPT for 2 Strings No Generation Limit

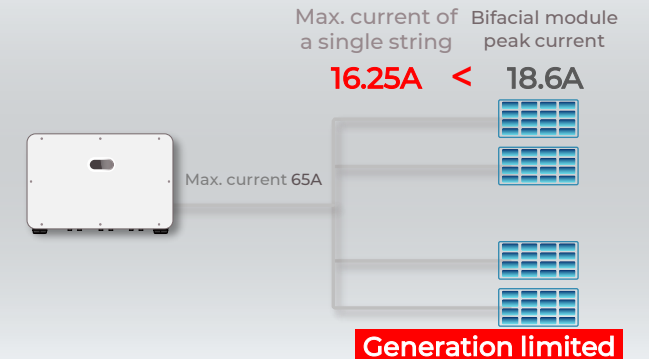

The max. current is 40A for each MPPT, and 20A for a single string, 1.4A higher than peak module current

VS

1 MPPT for 4 Strings 12.6% of Generation Limit

The max. current of a single string is 2.35A lower than the peak module current

*The comparison is based on 550W and 660W series modules, the peak current value of bifacial modules is calculated as 1.1 times of that of monofacial modules.

16 MPPTs for One Inverter, Increasing Yield by 1%+

16 MPPTs, Higher Yield

1 MPPT for 2 strings, higher accuracy
Independent optimization without mutual influence
Flexible module layout according to the terrain

Higher Efficiency

6 MPPTs, Low Yield

1 MPPT for 5 strings, low accuracy
Difficult to set modules with the same orientation on complex terrain
Occlusion and azimuth angle difference can induce "Barrel Effect"

Low Efficiency

*The data of yield increase come from Pvsyst simulation reports.

1 MPPT for 2 Strings, No Worry of Short-Circuit or Reversed Connection

1 MPPT for 2 Strings Safe and Reliable

Low fault current, no risk even
without shutdown

1 time of fault current during short-circuit or reverse connection, within the withstand range of cables and modules

According to relevant standards, overcurrent protective devices are not required.

1 MPPT for 5 Strings High Safety Risk

Huge fault current, a fire may occur if without switch-off

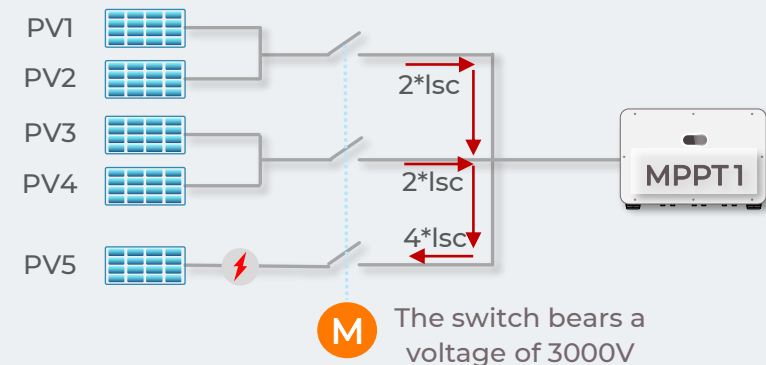

4 times of fault current during short-circuit or reverse connection, far beyond the withstand range of cables and modules

Overcurrent protective devices are necessary as
required in relevant standards

According to GB and IEC standards, overcurrent protective devices like fuses or circuit breakers should be equipped, and the isolating switch can not be regarded as an overcurrent protective device

Risk of switch-off failure of the isolating switch

Excessive short-circuit currents and rising temperatures can easily cause the internal dynamic contact holder to deform and seize

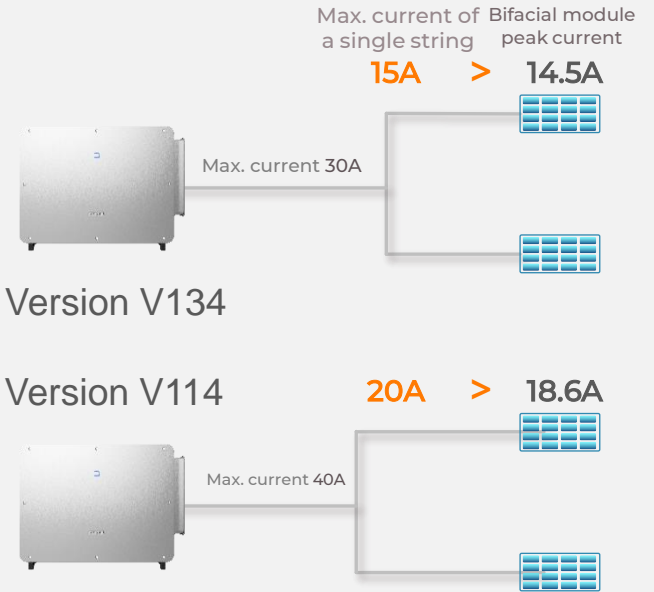

SG350HX : How to choose version / AC plate

1. Which PV module ?

- If $< 15 \text{ A/string} \Rightarrow$ use 16 MPPT, 32 inputs (30 A /MPPT) = Version V134
- If $< 20 \text{ A/string} \Rightarrow$ use 12 MPPT, 24 inputs (40 A /MPPT) = Version V114

2. Which cable ?

Multicore or single core ?
 One cable or Two cable per phase ?
 Anti-PID or not (1.8/3kV or 0.6/1kV)

- One cable per phase / Multicore \Rightarrow
- One cable per phase / Single core \Rightarrow
- Two cable per phase / Multicore \Rightarrow
- Two cable per phase / Single core \Rightarrow

See max cable diameter on AC plate details slide

SG350HX available version & AC plates

SG350HX

2 Cables per phase

- 12 MPPT/40A
V114
- 16 MPPT/30A
V134

Standard AC plate

Two cable per phase
Multicore
**B-B-005453*

Optional AC plate

One cable per phase
Multicore
**B-B-005454*

Optional AC plate

One cable per phase
Single core
**B-B-004987*

Optional AC plate

Two cable per phase
Single core
**B-B-005455*

SG350HX : AC plates details

1 cable / phase	Standard AC Plate	Optional AC plate
Cable inlet	1x Multi-core + PE	3x Single core + PE
Cable diameter AC+PE	1x 40-75 mm	4x 18-40 mm
Cable section	1x 15-32 mm	1x 8-18 mm
Terminal AC	70-400mm ²	70-400mm ²
Terminal PE	3x M12	3x M12
	+M12	+M12

B-B-004987

2 cable / phase	Standard AC Plate	Optional AC plate
Cable inlet	2x Multi core + PE	6x Single core + PE
Cable diameter AC+PE	2x 47-59 mm	7x 18-30 mm
Cable section	1x 10-30 mm	1x 8-18 mm
Terminal AC	120-185mm ²	98-185mm ²
Terminal PE	3x M12	3x M12
	+M12	+M12

B-B-005453

B-B-005455

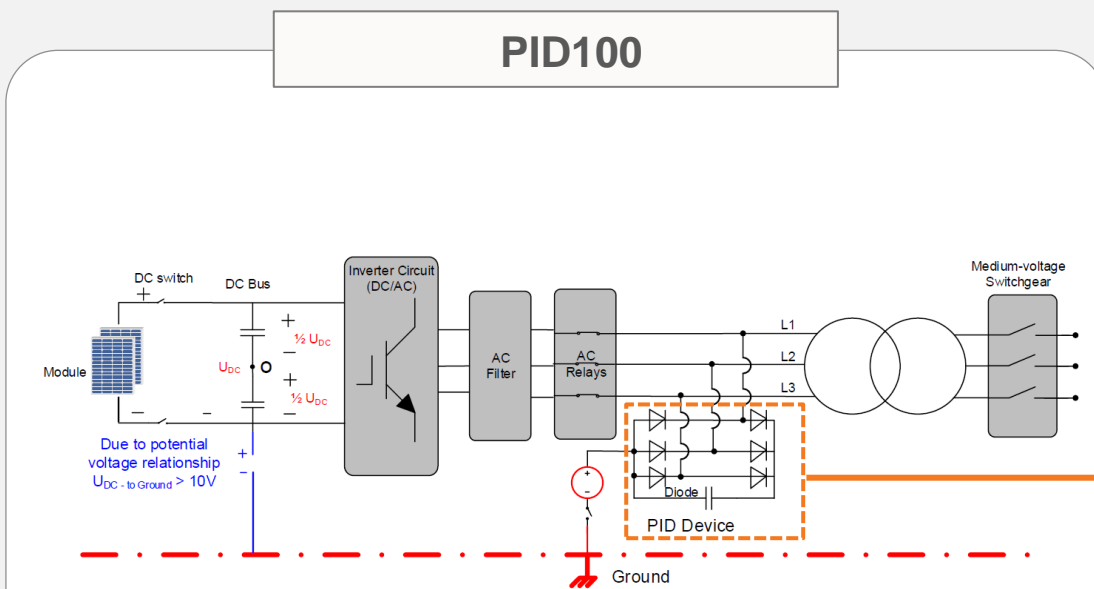

RACCORDEMENT AC

S'ADAPTER À TOUTES LES CONTRAINTES

EMU200A : Anti-PID / ISO

AC side PID lifting solution (AC virtual neutral point)

- Only support IT system
- Both Anti-PID + PID recovery (day + night)
- Need to use 1/1kV or 1.8/3kV AC cable due to AC common mode voltage up to 906V (instead of standard 0.6/1kV cable as 508V normally)
- IMD Insulation Monitoring Device (ISO) included with PID100 module

AC side Anti-PID / PID recovery
Insulation Monitoring Device - ISO

EMU200A

PID100

IT system brings more yield availability
& more system safety

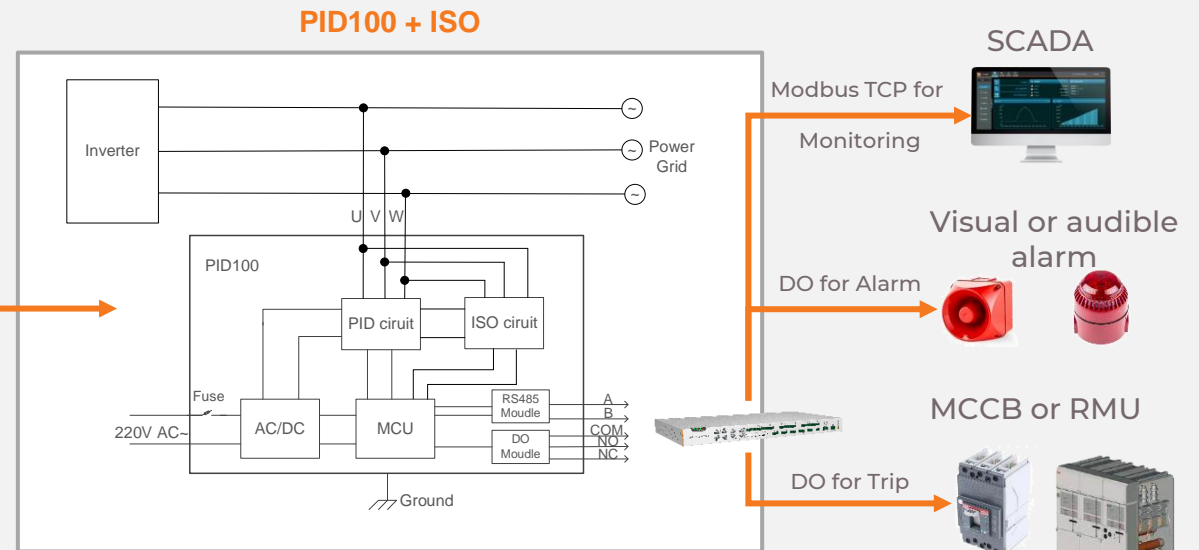

EMU200A : Anti-PID / ISO

PID100 modules :

- One module per transformer winding
- Include IMD Insulation Monitoring Device (ISO)
- If Anti-PID / ISO enable, control unit manage alternance of both system (default : 4h for PID mode and 20min for AC ISO)
- ISO compliant to IEC 61557-8
- Alarm/fault sent to SCADA
- Alarm/Trip from Logger DO for signal and trip of MCCB or RMU

**PID100 module includes
Insulation Monitoring Device (ISO) required for IT system**

SG350HX : Derating

Power Vs Temperature

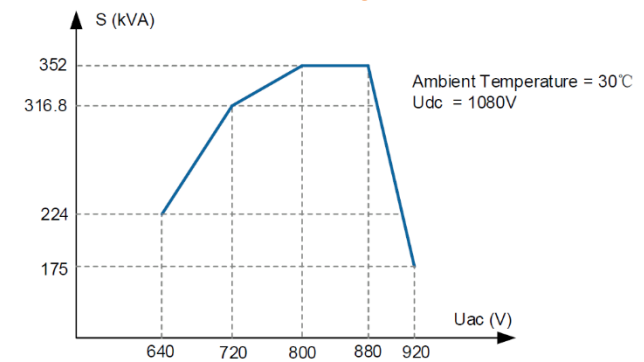

352 kW up to 30°C

Power Vs DC voltage

Power Vs AC voltage

500 - 1500 VDC range
880 - 1285 VDC at max Power

SG350HX : Certificates

Main standards

- IEC 62109-1/2 (Safety)
- EN 61000-6-2/4 - IEC 61000-3-11/12 - EN 62920 - EN 55011 (EMC)
- LVD 2014/35/EU – EMC 2014/30/EU (EU declaration of conformity)

Performance

- IEC 61683 / EN 50530 (Efficiency)
- IEC 61727 / IEC 61400-21 (Power quality)
- IEC 62116 (Islanding)
- IEC 62910 (LVRT)

Durability

- IEC 60068 (Environmental)
- ISO 12944 / ISO 9227 / ISO 6270 (C5 corrosion)
- IEC 60529 (IP 66)

Grid standards

- EN 50549-2 (EU MV grid connection)
