Precision on every roof: Connecting data, design, and delivery for C&I solar

Welcome!

Do you have any questions?  

Send them in via the Q&A tab.  We aim to answer as many as we can today!

You can also let us know of any tech problems there.

We are recording this webinar today. 

We'll let you know by email where to find it and the slide deck, so you can re-watch it at your convenience.  

Precision on Every Roof:

**Connecting Data, Design & Delivery
for C&I Solar**

Kim Eyckmans

Founder & CEO at Virto Solar

- **Autodesk Certified Engineer** with over 15 years of experience
- Engineered **1,000+ rooftop and ground-mount systems** ranging from 100 kW to 100 MW
- Delivered solar projects across **Belgium, the Netherlands, Germany, the UK, Italy, France, and Portugal**
- Recognized expert in **large-scale solar engineering and project delivery**

Joris Hias

Product Manager & Strategist at Virto Solar

- Product leader at Virto Solar
- Focused on tools that help solar professionals **design and deliver large-scale PV projects**
- Background in IT consulting for the **public services, logistics, and retail sector**
- Advocate of **user-centric design**, balancing business, technology, and user needs in real-world challenges

OVERVIEW

- 1 Company Introduction
- 2 Pain Points in Solar Design
- 3 From Challenges to Solutions
- 4 Interactive Q&A

About Virto Solar

Accelerate the global **energy transition** by making the design of large-scale solar projects faster, smarter, and more reliable.

 Our roots

 Our journey

 Who we are today

 What makes us different

The Smartest Way to Design Solar

Today

- ⚡ Faster time-to-project
- 🎯 Bankable precision
- 🔧 End-to-end workflow
- 💡 Collaboration-ready
- 🔒 Reliable results

Ready to Launch

- 📡 Drone & LiDAR conversion

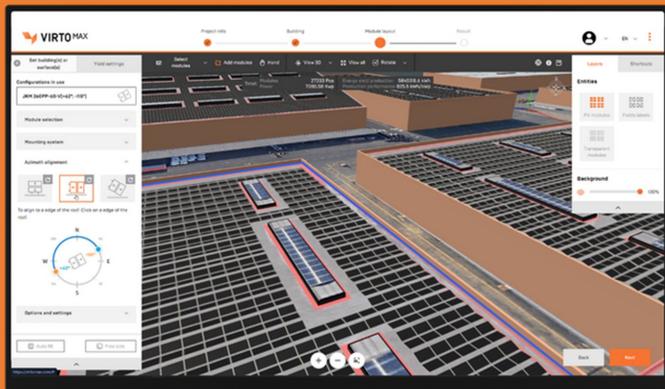

Tomorrow

- 🤖 AI-powered design

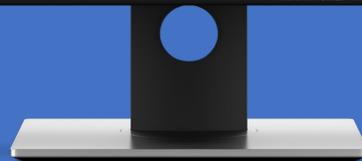

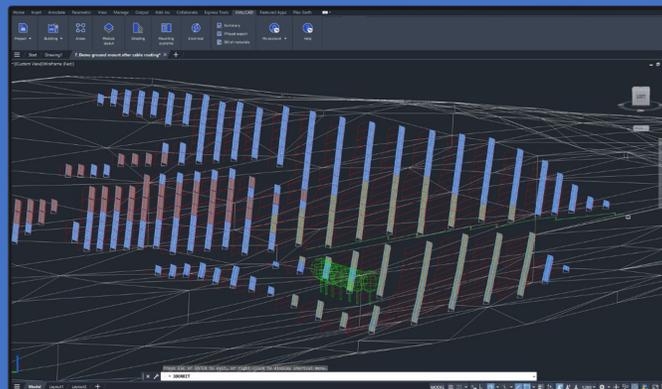

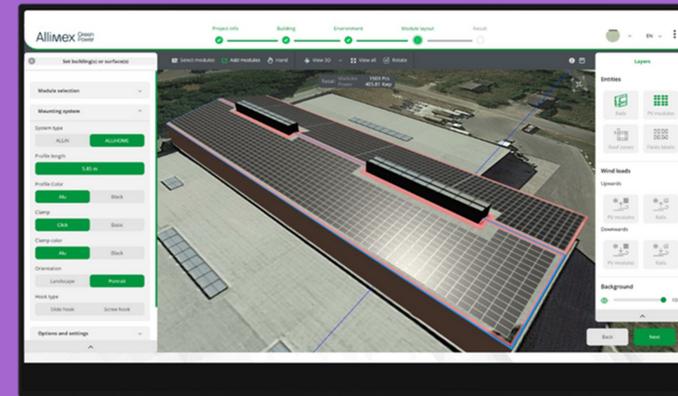

Shaping The Future With
Conceptual PV Design

The CAD Standard for
Large-Scale Solar Engineering

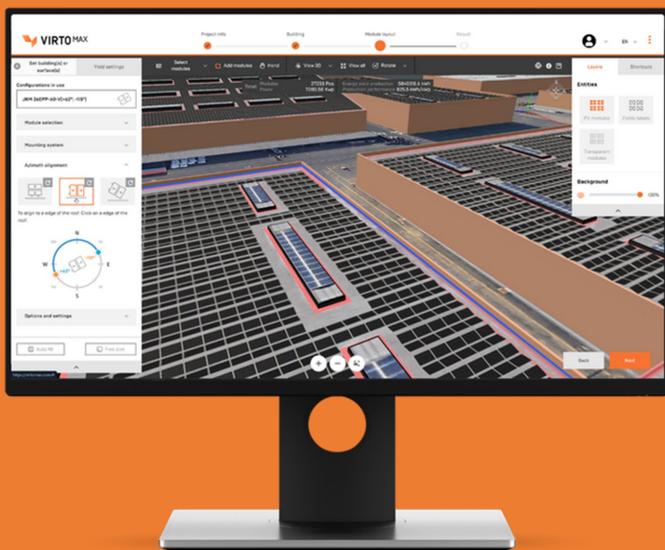

Automating Structural Analysis
for Speed and Precision

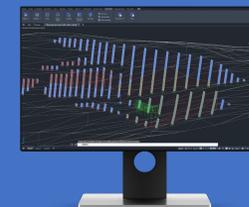

Shaping The Future With Conceptual PV Design

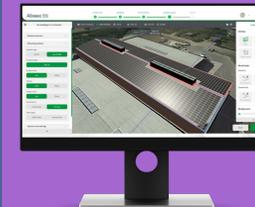

- Web app that maximize solar potential with rapid conceptual design, automated layouts and seamless workflows.
- Used by sales engineers & projects developers
- C&I rooftop & carport projects
- Continue with  VIRTO CAD

The CAD Standard For Large-Scale Solar Engineering

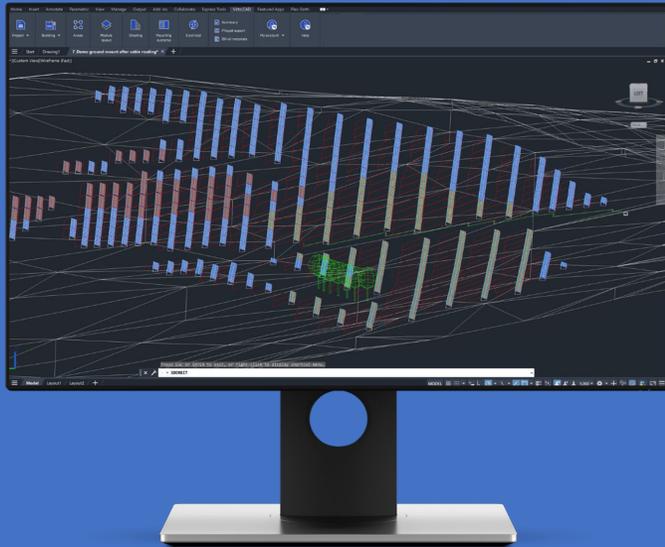

Automating Structural Analysis for Speed and Precision

The CAD Standard For Large-Scale Solar Engineering

- AutoCAD/BricsCAD plugin
- Precise drawings and accurate calculations for C&I and Utility-Scale PV projects.
- Construction-ready bill of materials
- For EPCs and engineering firms
- Proceed from  **VIRTO MAX**

New in 2.0

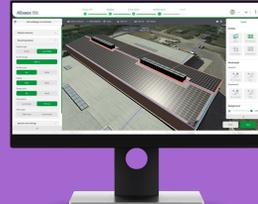

- New User Interface
- Improved workflows
- Enhanced and new features

Shaping The Future With
Conceptual PV Design

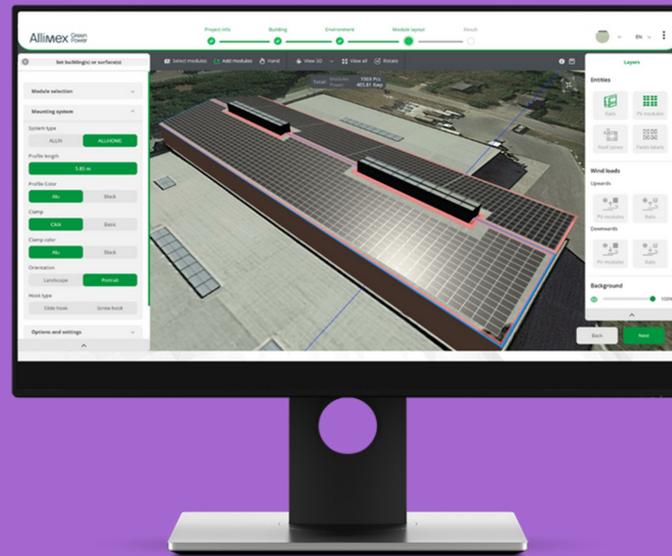

Automating Structural Analysis
for Speed and Precision

VIRTO CORE

Automating Structural Analysis for Speed and Precision

- Custom configurator for mounting/racking manufacturers
- Automates mounting system calculations of ballast, anchors and hooks on flat and pitched roofs
- Boost sales, speed and precision
- Increases brand awareness and loyalty

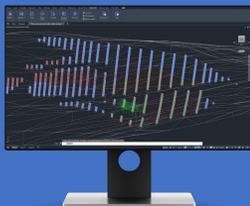

VIRTO MAX

Shaping The Future With Conceptual PV Design

VIRTO CAD

The CAD Standard For Large-Scale Solar Engineering

“Solar projects struggle not because of people,
but because processes aren’t connected.”

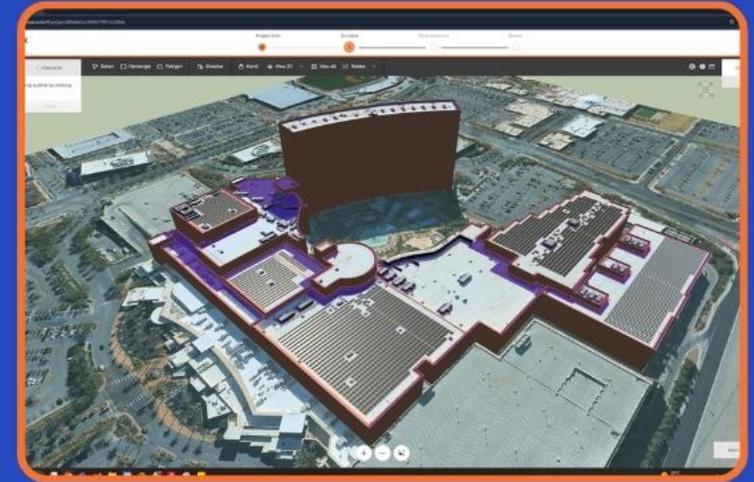

⚡ Key frictions in Solar Design

- Experienced the **same frustrations** again and again:
 - Incomplete or outdated site data
 - Endless redesigns and coordination issues
 - Material delays and last-minute on-site surprises
- Founded **Virto Solar** to solve these challenges — end to end

Data Capturing

Pre-sales Design

Detailed Engineering

Logistics & Construction

Data Capturing

The foundation of every project

- Projects often start with **inaccurate or incomplete data**
- **Outdated** imagery or **manual** measurements miss key details
- **Limited roof access** and **safety risks** make on-site data collection difficult
- Early data errors cause **wrong layouts and costly redesigns** later
- **Accurate digital site data** ensures every next step starts right

“Inaccurate data creates downstream chaos.”

Pre-Sales Design

The Race Begins

- Pre-sales teams must design quickly, often with partial data
- Knowing the loads on the roof is crucial, even in the preliminary phase
- Assumptions made early lead to **rework and revisions** later
- **Module changes** before construction = complete redesign
- Early alignment between sales and engineering avoids friction downstream

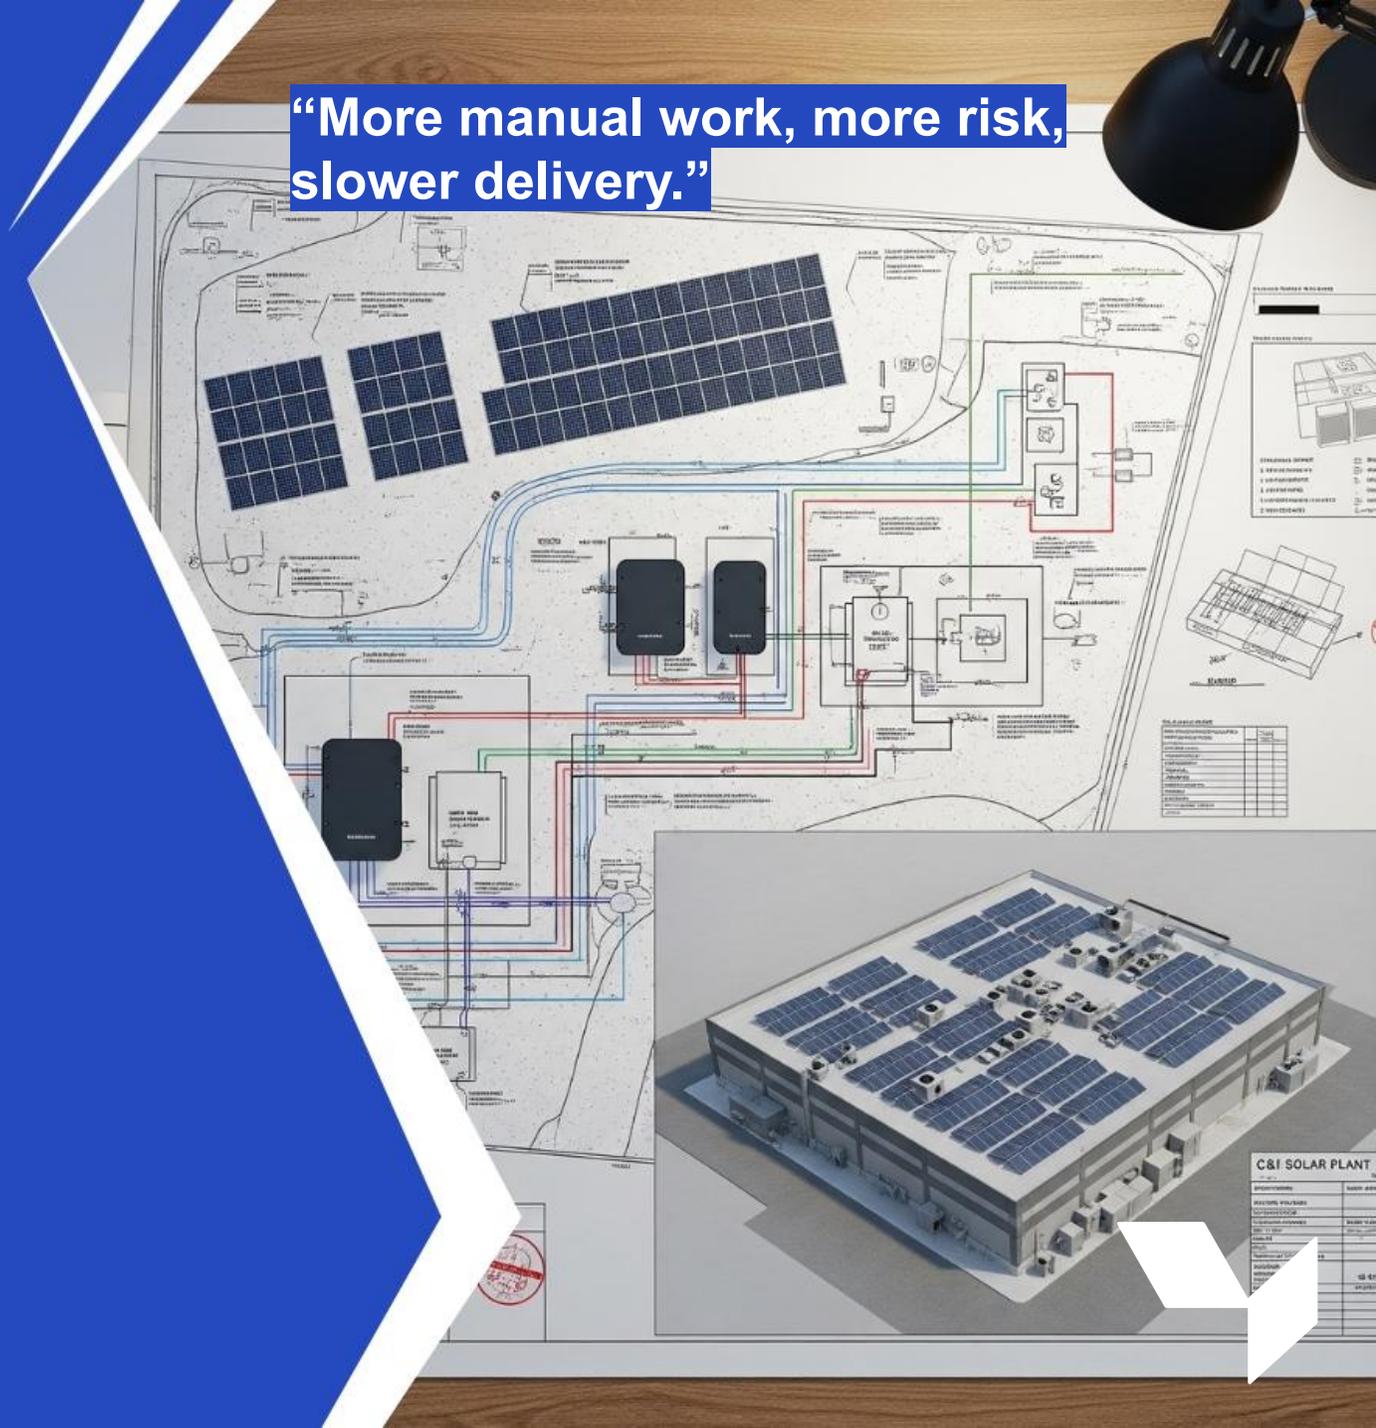

Detailed Engineering

Precision Under Pressure

- Engineers often have to **rebuild the same layout** in third-party tools without syncing back and forth.
- Each manual step adds **risk of inconsistency and error**
- **Overlooked details** (thermal breaks, cable trays, shading) cause rework
- **Cable lengths and trays** are still calculated in spreadsheets, a **slow, error-prone task** without a full 3D view

“More manual work, more risk, slower delivery.”

Logistics & Construction

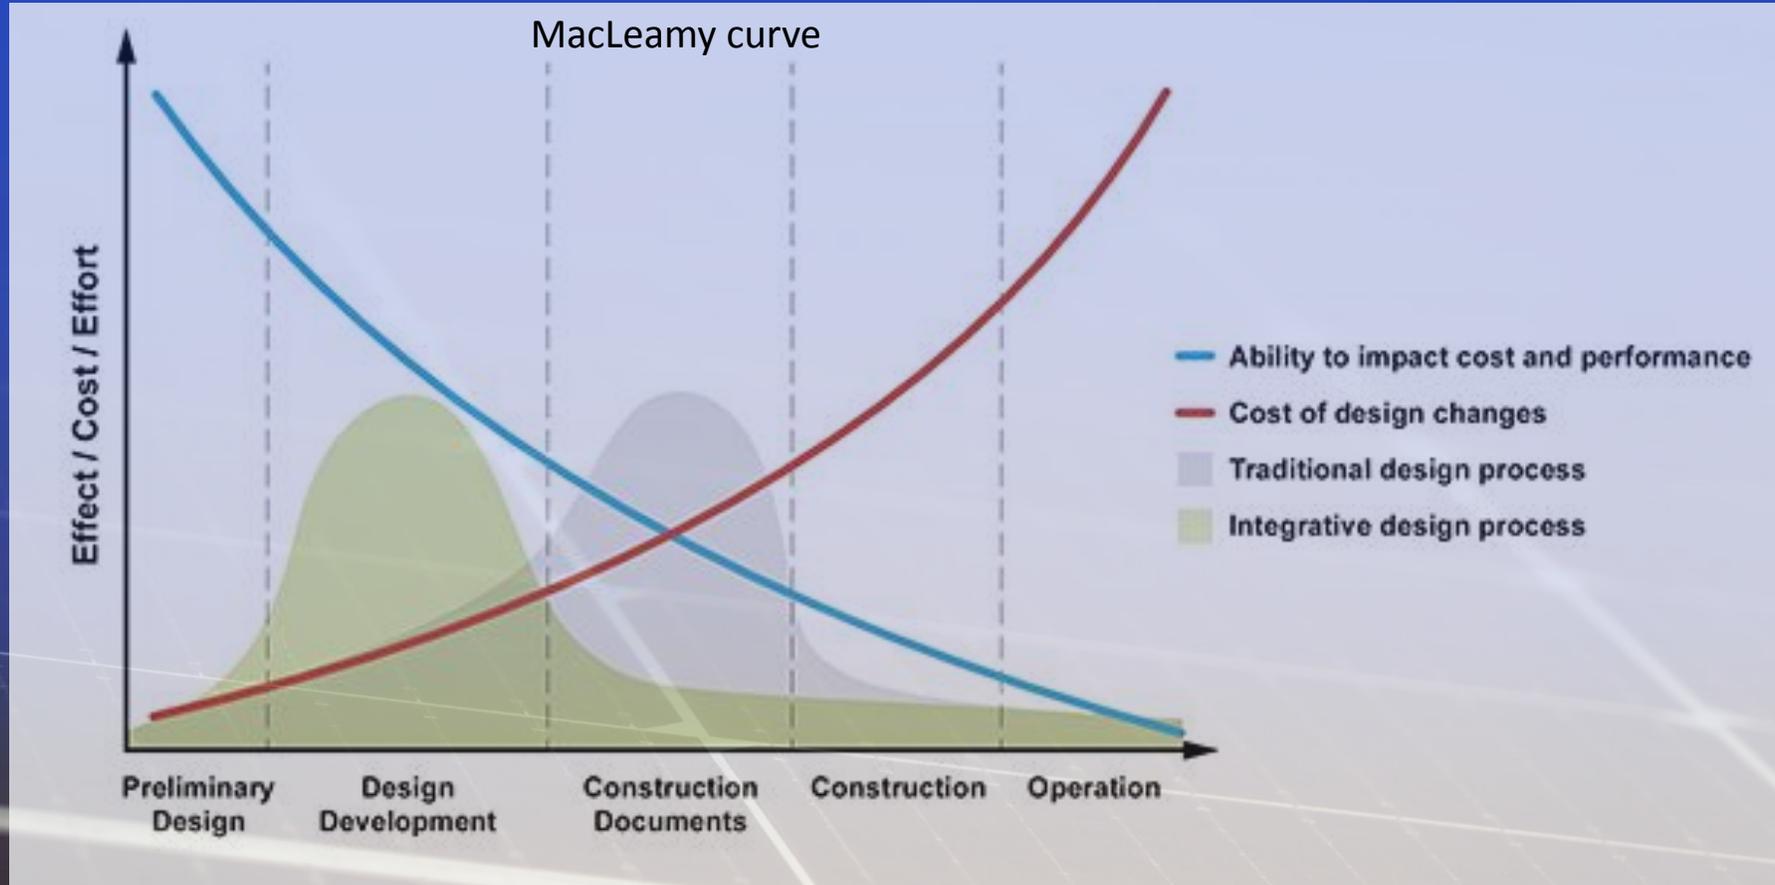

Turning Plans into Reality

- Logistics issues often appear **before construction even starts**
- Materials arrive **too early or too late**, causing site chaos or idle time
- **No clear link** between design and delivery planning, crews waste time sorting parts
- **Design changes** due to unforeseen circumstances lead to:
 - **Incorrect installations**, or
 - **Massive delays** waiting for engineering revisions

“Disconnected logistics and last-minute changes can derail even the best-designed projects.”

When every phase is connected — from data to construction solar projects become predictable, efficient, and scalable.

From Challenges to Solutions: Turning PV Pain Points into Opportunities

Precision Starts with Data

Start with high-quality data. End with a flawless design.

- Upload **high resolution data**:
 - Drone imagery
 - LiDAR data
 - Digital elevation models
 - Building information models (BIM)
- **Virto.RISE** automatically generates buildings and obstacles
- **Save hours of rework** and guarantee design accuracy from the start

Are you ready to
RISE above?

Smart Automation, Full Control

Automated — but never rigid.

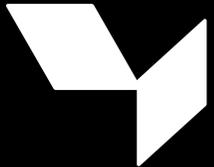

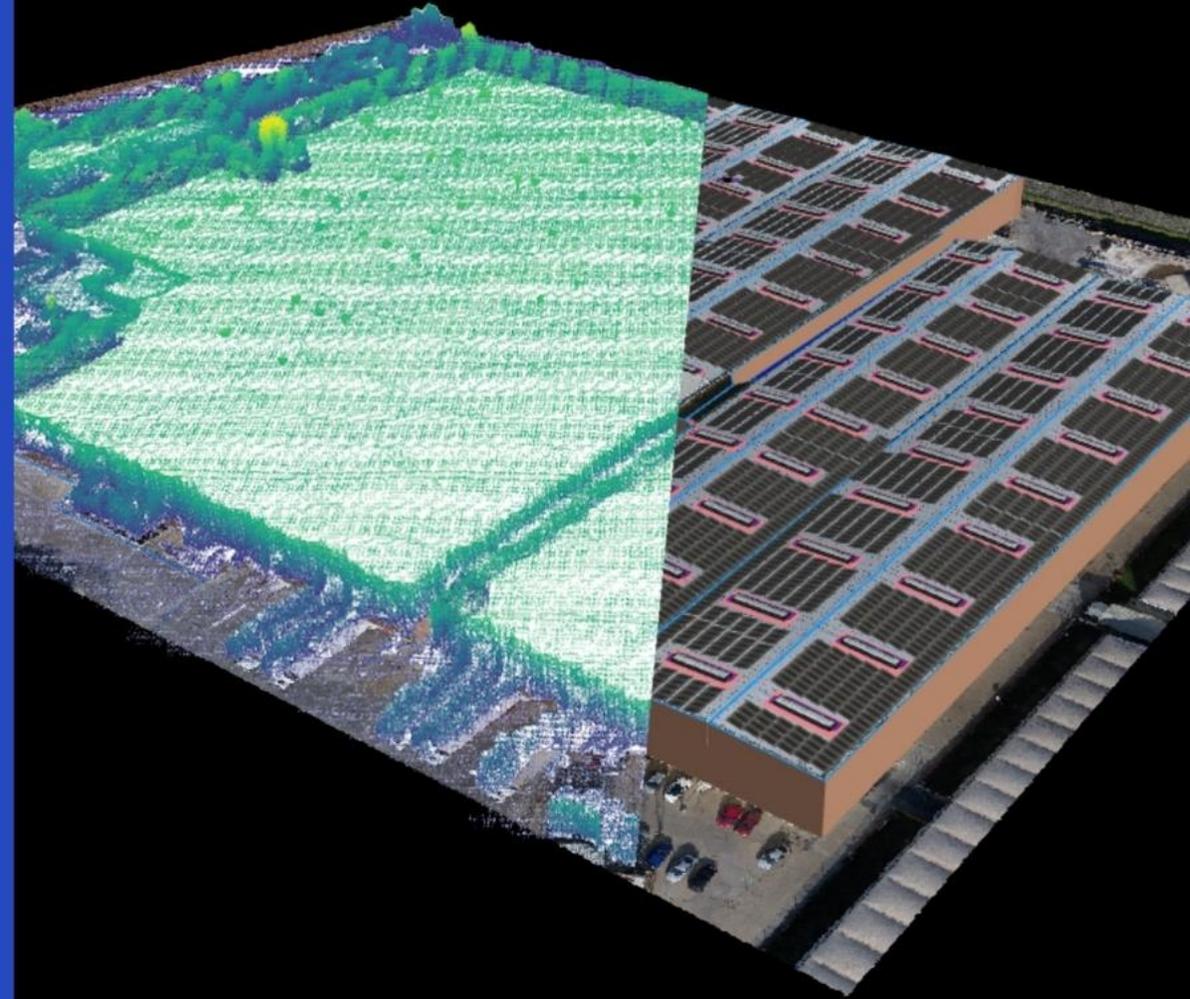

- Keep **full control** over the final model and design
- Easily adjust parameters of buildings, roof planes, or obstacles
- Automation **accelerates your work**

The Power of a Digital Twin

From model to reality and back!

- **Realistic 3D model** of the building site
 - Easily place and adjust PV fields directly in 3D space
 - Enforce & manage thermal breaks
 - Calculate realistic shadows which lead to precise yield estimates
- Designs are **buildable**, not just theoretical

From 3D Model to Smart System Design

All the details, automatically in one place.

- With our digital twin, you can easily convert your model into a **working PV system** by
 - Configuring inverters and defining inverter zones
 - Calculating cable lengths and cross-sections
 - Evaluating system efficiency and performance
 - Run accurate yield simulations directly in the model
- **Eliminate switching costs**

Connected Workflows. Seamless Collaboration.

Integrated from the start!

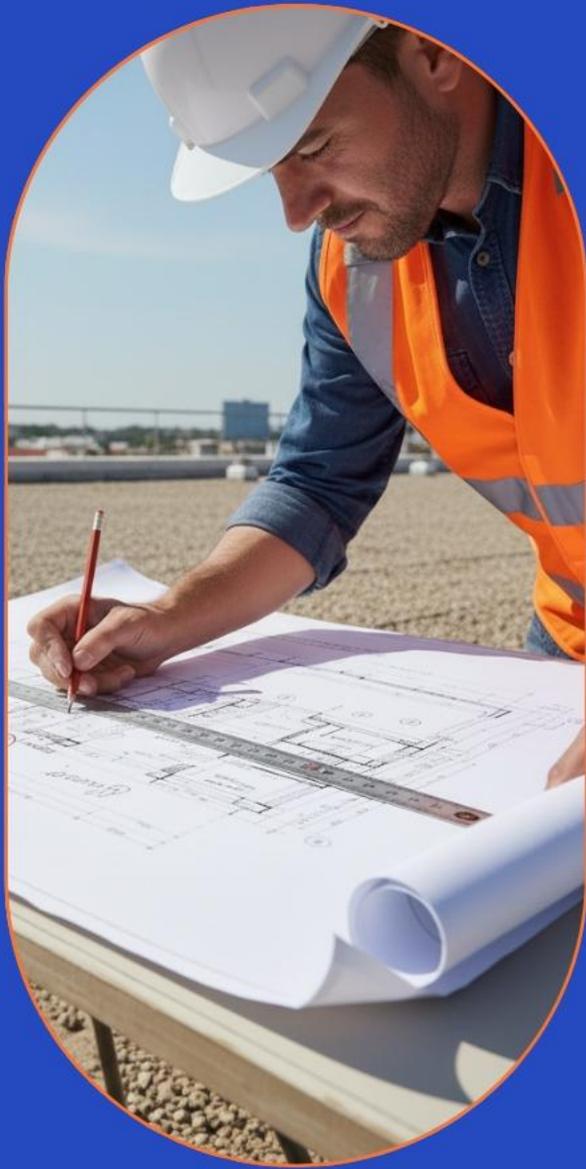

- Export and share with colleagues, departments, or external partners
- Direct integrations with key ecosystem software
- Ensure consistent handoffs and save time, reduce errors, and keep every stakeholder aligned

Stay Agile, Stay Accurate

When projects change, you just go with the flow!

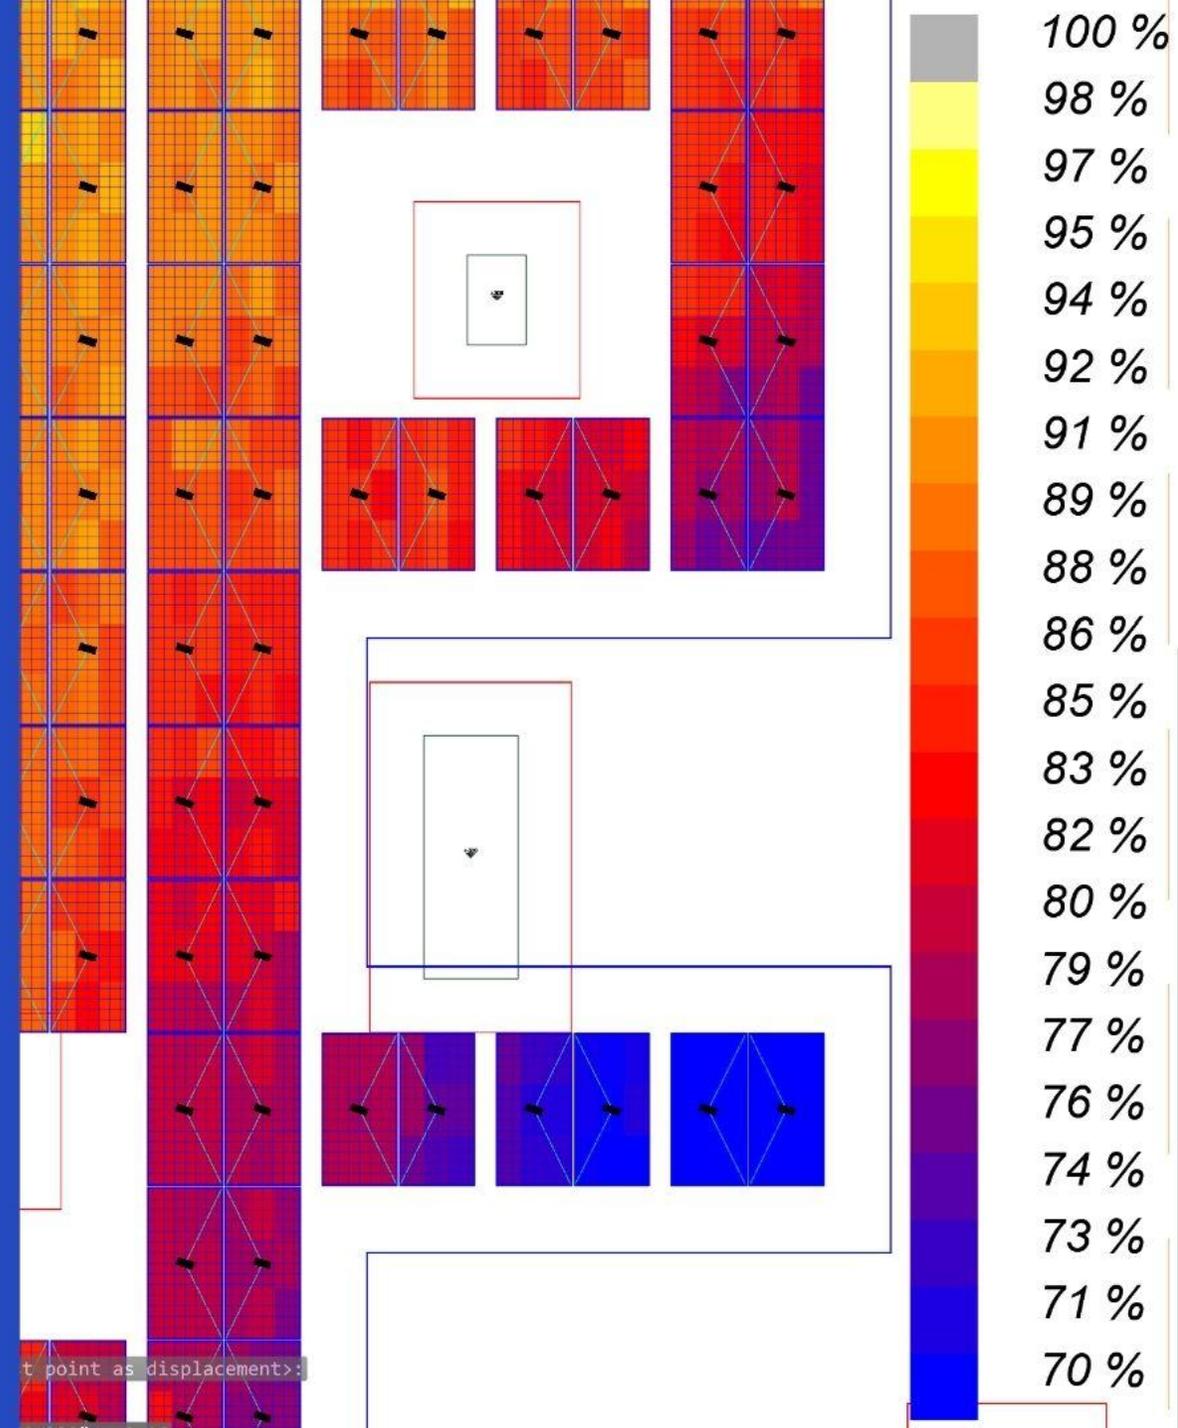

- Designed for **real-world change**
- Effortlessly update designs when conditions evolve
 - Add obstacles
 - Adjust layouts
 - Add new obstacles
 - ...
- Embrace the change and **avoid hours of rework**

Simulate & Optimize in 3D

See the sun. Understand the impact.

- Combine physical accuracy with electrical intelligence for optimal performance
 - Run detailed irradiance simulations directly in 3D
 - Automatically identify and remove shaded or underperforming panels
 - Map electrical strings efficiently across the layout
 - Plan tray and cable routing for real-world buildability

Safety by Design

Automation that strengthens your design

— literally.

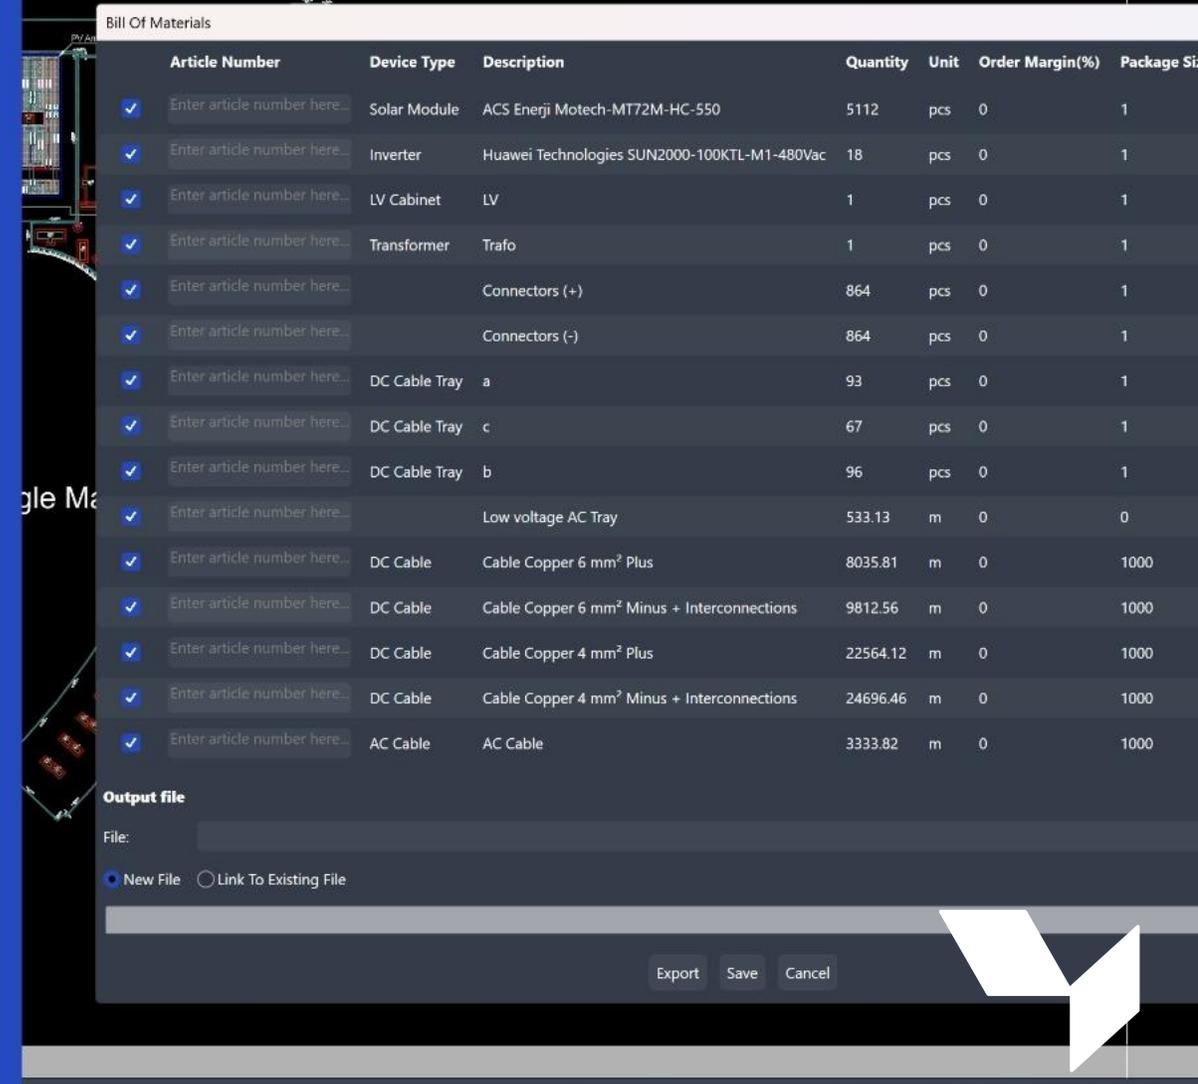

- A safe & sound design
 - Automated ballast and anchor calculations ensure structural safety
 - Considers roof load and point load for accurate validation
 - Built on country-specific standards
- Ensures **reliable and safe designs**. Every single time!

From Design to Deliverables

Everything you need and more!

- **Move** your project forward with
 - A detailed Bill of Materials (BOM) to simplify logistics and procurement
 - Exports for bankable yield simulation to convince investors
 - Construction ready plans to align engineers, clients & installers
- Standardized outputs ensure **alignment** between stakeholders and **consistent communication** & interpretation across teams

Smarter, Flexible, Connected

The first blow, is half the battle.

Smarter, Flexible, Connected

Automation is nice, but flexibility crucial

Smarter, Flexible, Connected

Together is better

We RISE it
We MAXIMIZE it
We DESIGN it

Are you ready to RISE above?
